

[21]: # code for Linear regression creating sample

```
np.random.seed(42)
currentunit = np.array([200,250,275,300,250,375,400,450,475,500]).reshape(-1, 1)
unitprice = np.array([600,750,900,1200,1500,1900,2500,3100,3600,4000])
df = pd.DataFrame({'current(unit)': currentunit.flatten(), 'Price ($)': unitprice})
print("Dataset:")
print(df)
print(f"\n below 200 free" )
```

Dataset:

	current(unit)	Price (\$)
0	200	600
1	250	750
2	275	900
3	300	1200
4	250	1500
5	375	1900
6	400	2500
7	450	3100
8	475	3600
9	500	4000
