The image shows a Python IDLE Shell 3.10.0 window. The left pane contains the source code for a BMI calculator script. The right pane shows the execution output, including the Python version, file path, and user input for weight and height, resulting in a BMI value of 27.78 and a category of 'Overweight'.

```
# BMI Calcul
weight = flo
height = flo
bmi = weight
print("Your BMI value is : ")
if bmi < 18.5:
    print("Underweight")
elif bmi < 25:
    print("Normal weight")
elif bmi < 30:
    print("Overweight")
else:
    print("Obesity")
```
