

#example for single inheritance

```
class company :  
    def property (self):  
        print("laptop/id/cabin")
```

```
class kishore(company):  
    pass
```

```
a=kishore()  
a.property()  
laptop/id/cabin
```

#multiple inheritance

```
class youtube:
    def user (self):
        print("youtube premium subscription")
```

```
class shopowner:
    def customer (self):
        print("daily customer for the shop")
```

```
class doctor:
    def patient (self):
        print("regular checkup patient")
```

```
class kishore(youtube, doctor, shopowner) :
    pass
```

```
k=kishore()
k.patient()
regular checkup patient
```

```
k.user()
youtube premium subscription
k.customer()
daily customer for the shop
```

```
#multilevel inheritance
```

```
class firstyear:  
    def sem1(self):  
        print("first year")
```

```
class secondyear(firstyear):  
    def sem3(self):  
        print("second year")
```

```
class finalyear(secondyear):  
    def sem5(self):  
        print("third year")
```

```
class kishore(finalyear):  
    pass
```

```
e=kishore()  
e.sem1()  
first year  
e.sem3()  
second year  
e.sem5()  
third year
```

#hierarchical inheritance:

```
class father:
    def employee(self):
        print("gets salary upto 50k")
```

```
class kishore(father):
    def traineee(self):
        print("gets salary of 15k")
```

```
class hemanth(father):
    def parttime(self):
        print("gets salary of 5k")
```

```
KISHORE=kishore()
```

```
h=hemanth()
```

\

```
KISHORE.employee()
```

```
gets salary upto 50k\
```

```
KISHORE.traineee()
```

```
gets salary of 15k
```

```
h.employee()
```

```
gets salary upto 50k
```
